A Brief History of Automatic Control Stuart Bennett A ... was drawn from the measuring system. The most significant control development during the 18th century was the steam engine governor. The origins of this device lie in the lift-tenter mechanism which was used to control the gap between the grinding-stones in both wind and water mills. Matthew Boulton (1728-1809) described the lift ...

A control system communicating with sensors and actuators over a communication network will be called a distributed real-time control system. In distributed real-time control systems, see Figure 1.1, data are sent and received by network nodes of different kind and manufacturers. Network nodes that are of special interest for distributed control are sensor nodes, actuator nodes, and ...
